

The kvdefinekeys package

Heiko Oberdiek*

2016/05/16 v1.4

Abstract

Package kvdefinekeys provides `\kv@define@key` to define keys the same way as keyval's `\define@key`. However, it works also using ini-TeX.

1 Documentation

1.1 Motivation

`\kvsetkeys` serves as replacement for keyval's `\setkeys`. This package adds macros to define keys, closing the gap `\kvsetkeys` leaves.

*Please report any issues at <https://github.com/ho-tex/oberdiek/issues>

<code>\kv@define@key {<family>} {<key>} [{<default>}] {<definition>}</code>

Macro `\kv@define@key` reimplements `keyval`'s `\define@key`. Differences to the original:

- The defined keys also allow `\par` inside values.
- Shorthands of package `babel` are supported in family and key names.
- Macro `\kv@define@key` is made robust if ε -TeX's `\protected` or L^AT_EX's `\DeclareRobustCommand` are found.

2 Implementation

2.1 Identification

```
1 <*package>
```

Reload check, especially if the package is not used with L^AT_EX.

```

142 }%
143 }

```

\KVD@DefineKeyWithDefault

```

144 \long\def\KVD@DefineKeyWithDefault#1#2[#3]{%
145 \expandafter\def\csname KV@#1@#2@default\endcsname

```

```

146 \expandafter{%
147   \csname KV@#1@#2\endcsname{#3}%
148 }%
149 \long\expandafter\def\csname KV@#1@#2\endcsname##1%
150 }

151 \KVD@AtEnd%
152 \</package>

```

3 Installation

3.1 Download

Package. This package is available on CTAN¹:

[CTAN:macros/latex/contrib/oberdiek/kvdefinekeys.dtx](#) The source file.

[CTAN:macros/latex/contrib/oberdiek/kvdefinekeys.pdf](#) Documentation.

Bundle. All the packages of the bundle ‘oberdiek’ are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

[CTAN:install/macros/latex/contrib/oberdiek.tds.zip](#)

TDS refers to the standard “A Directory Structure for T_EX Files” ([CTAN:pkg/tds](#)). Directories with `texmf` in their name are usually organized this way.

3.2 Bundle installation

Unpacking. Unpack the `oberdiek.tds.zip` in the TDS tree (also known as `texmf` tree) of your choice. Example (linux):

```
unzip oberdiek.tds.zip -d ~/texmf
```

3.3 Package installation

Unpacking. The `.dtx` file is a self-extracting `docstrip` archive. The files are extracted by running the `.dtx` through plain T_EX:

```
tex kvdefinekeys.dtx
```

TDS. Now the different files must be moved into the different directories in your installation TDS tree (also known as `texmf` tree):

```

kvdefinekeys.sty → tex/generic/oberdiek/kvdefinekeys.sty
kvdefinekeys.pdf → doc/latex/oberdiek/kvdefinekeys.pdf
kvdefinekeys.dtx → source/latex/oberdiek/kvdefinekeys.dtx

```

If you have a `docstrip.cfg` that configures and enables `docstrip`’s TDS installing feature, then some files can already be in the right place, see the documentation of `docstrip`.

3.4 Refresh file name databases

If your T_EX distribution (T_EX Live, mikT_EX, ...) relies on file name databases, you must refresh these. For example, T_EX Live users run `texhash` or `mktexlsr`.

¹[CTAN:pkg/kvdefinekeys](#)

3.5 Some details for the interested

Unpacking with L^AT_EX. The `.dtx` chooses its action depending on the format:

plain T_EX: Run `docstrip` and extract the files.

L^AT_EX: Generate the documentation.

If you insist on using L^AT_EX for `docstrip` (really, `docstrip` does not need L^AT_EX), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{kvdefinekeys.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

Generating the documentation. You can use both the `.dtx` or the `.drv` to generate the documentation. The process can be configured by the configuration file `ltxdoc.cfg`. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdfL^AT_EX:

```
pdflatex kvdefinekeys.dtx
makeindex -s gind.ist kvdefinekeys.idx
pdflatex kvdefinekeys.dtx
makeindex -s gind.ist kvdefinekeys.idx
pdflatex kvdefinekeys.dtx
```

5 History

[2010/03/01 v1.0]

- First version.

[2010/08/19 v1.1]

- Documentation fix, no code change.

[2011/01/30 v1.2]

- Already loaded package files are not input in plain T_EX.

[2011/04/07 v1.3]

- Support for package `babel`'s shorthands added.
- `\kv@define@key` is made robust if available.

[2016/05/16 v1.4]

- Documentation updates.

6 Index

Numbers written in *italic* refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; plain numbers refer to the code lines where the entry is used.
